I N S T I T U T E

African Advanced Institute for Information
& Communications Technology

Are Scientists, Engineers
and Technologists born or
can we nurture them?

Project Director – YESA Programme

Key Concepts

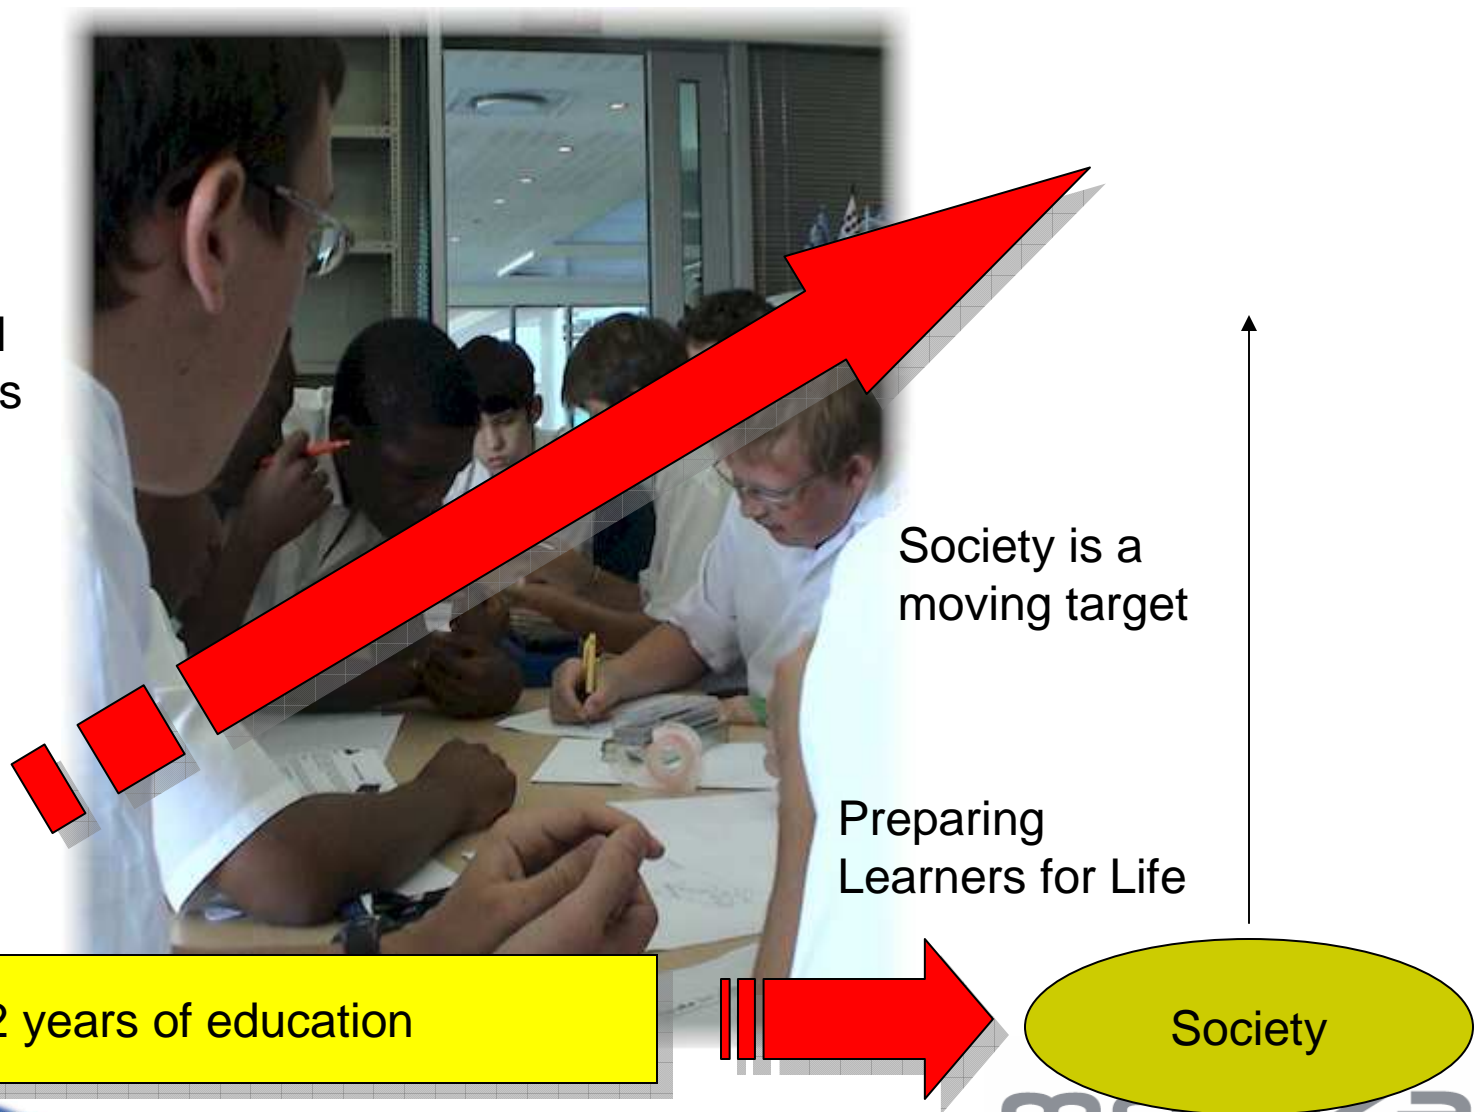

- Need for sustained skills development in key areas
- Forced to continue importing professionals
- Poor quality teaching in the areas of Science, Mathematics and Technology
- Education system promotes mediocrity through a sausage factory
- Young Engineers of South Africa (YESA)
 - aimed at generating a pipeline
 - stimulating interventions starting at preschool level through to grade 12
 - hands on challenges which promote the use of real-world tools, with a strong ICT foundation
 - encourages creativity and innovation leading to knowledge generation
 - group work, communication, research, application, construction and fun learning
- More career changing interventions
- Career guidance and entrepreneurial opportunities

THERE ARE NO FAILURES

Teaching for a society that no longer exists

There is a need to shift the focus of education

The Zeitgeist

Nature / Nurture debate

The intellectual and culture "flavor" of a time and place

Ridley 1999

Nature

Nurture

Western psychological world
is somewhere in between
The modern view
is "Interactionist".

Late 1800's - UK
Darwinism took off
The role of genetically
determined capability was
considered very important.

1960's – USA "tabula rasa" (blank
state) view of human intelligence
All people are capable of much more,
if given conducive environmental
conditions in which to reach their
potential

Constructionism
Constructivism

meraka
I N S T I T U T E

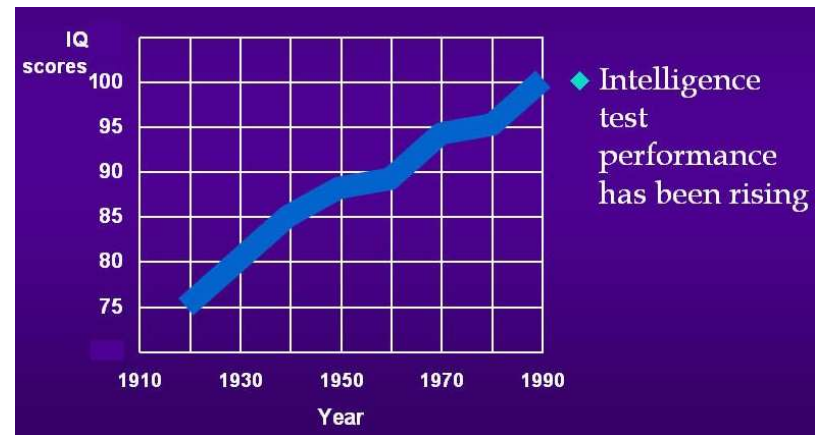

“In an increasingly complex world, sometimes old questions require new answers.”

The Flynn effect:

Are we getting smarter?

- Average IQ improving by 3 IQ Points per decade since WWII
- Causes
 - Diet
 - Schooling
 - Modern visual stimulus
 - Other

Intelligence varies with at least 21 factors

- Infant malnutrition (-ve)
- Birth weight
- Birth order
- Height
- Number of siblings (-ve)
- Number of years in school
- Social group of parental home
- Father's profession
- Father's economic status
- Degree of parental rigidity (-ve)
- Parental ambition
- Mother's education
- Average TV viewing (-ve)
- Average book-reading
- Self-confidence according to attitude scale measurement
- Age (negative relationship, applies only in adulthood)
- Degree of authority in parental home (-ve)
- Criminality (-ve)
- Alcoholism (-ve)
- Mental disease (-ve)
- Emotional adaptation

Constructivism

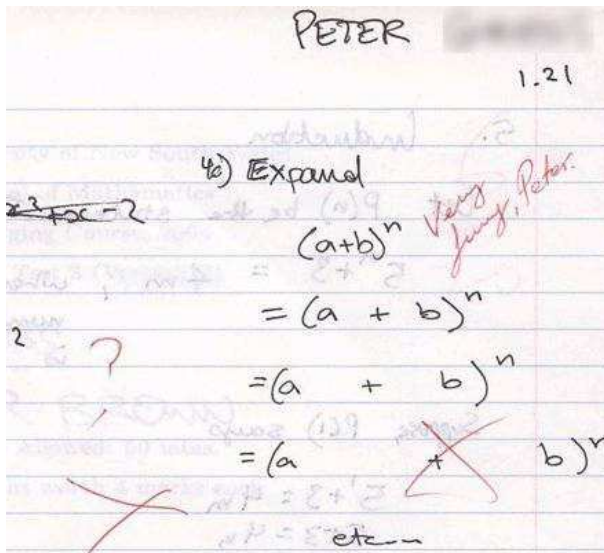

- theory about how people learn
 - people construct their own understanding and knowledge of the world
 - we are active creators of our own knowledge
- In the classroom
 - encourage students to use active techniques (experiments, real-world problem solving) to create more knowledge
 - to reflect on and talk about what they are doing
 - Teacher has to understand pre-existing conceptions to guide the activity
- Objectives vs Outcomes
 - What are you going to teach
 - What can the learners do not that you have taught them

Constructionism, Seymour Papert

- Children learn best when they are in the active role of the designer and constructor
- Papert “It is the idea that happens especially felicitously in a context where the learner is consciously engaged in constructing a public entity”
- The creation process and the end product

‘If you think education is expensive,
try ignorance!’

Dasgupta

3. Find x.

Here it is

Ocular Trauma - by Wade Clarke ©2005

Technological Ladder

- Digital Chasm syndrome
- Moving beyond the digital divide
- Rungs of the technological ladder

Replacement

Tool for
creativity & innovation

Knowledge Workers **Learners**

Research

Email and Internet

Word Processing

Computer Literacy

Real world learning

- Young Engineers of South Africa
 - 3-18
 - Hands on experiences
 - Strong emphasis on group work
 - Use of real world tools
 - Moving beyond word processing
 - Having fun

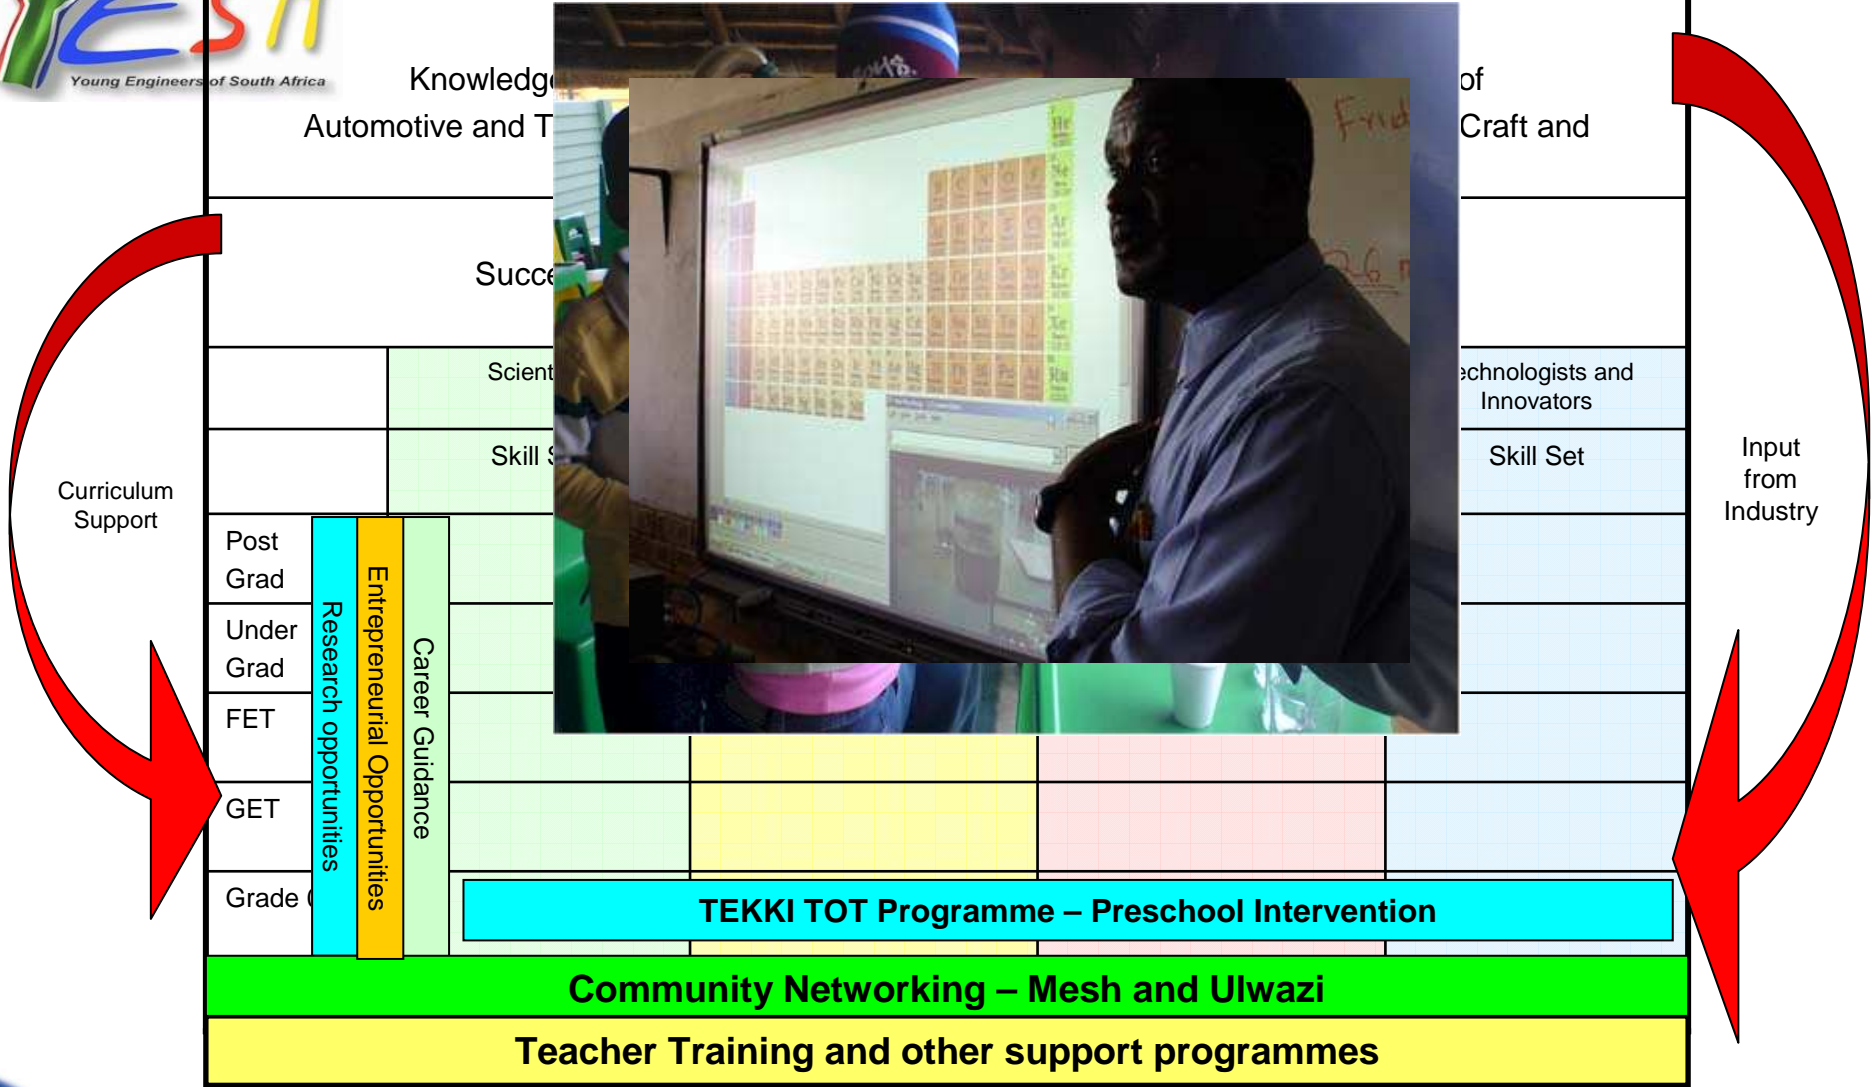

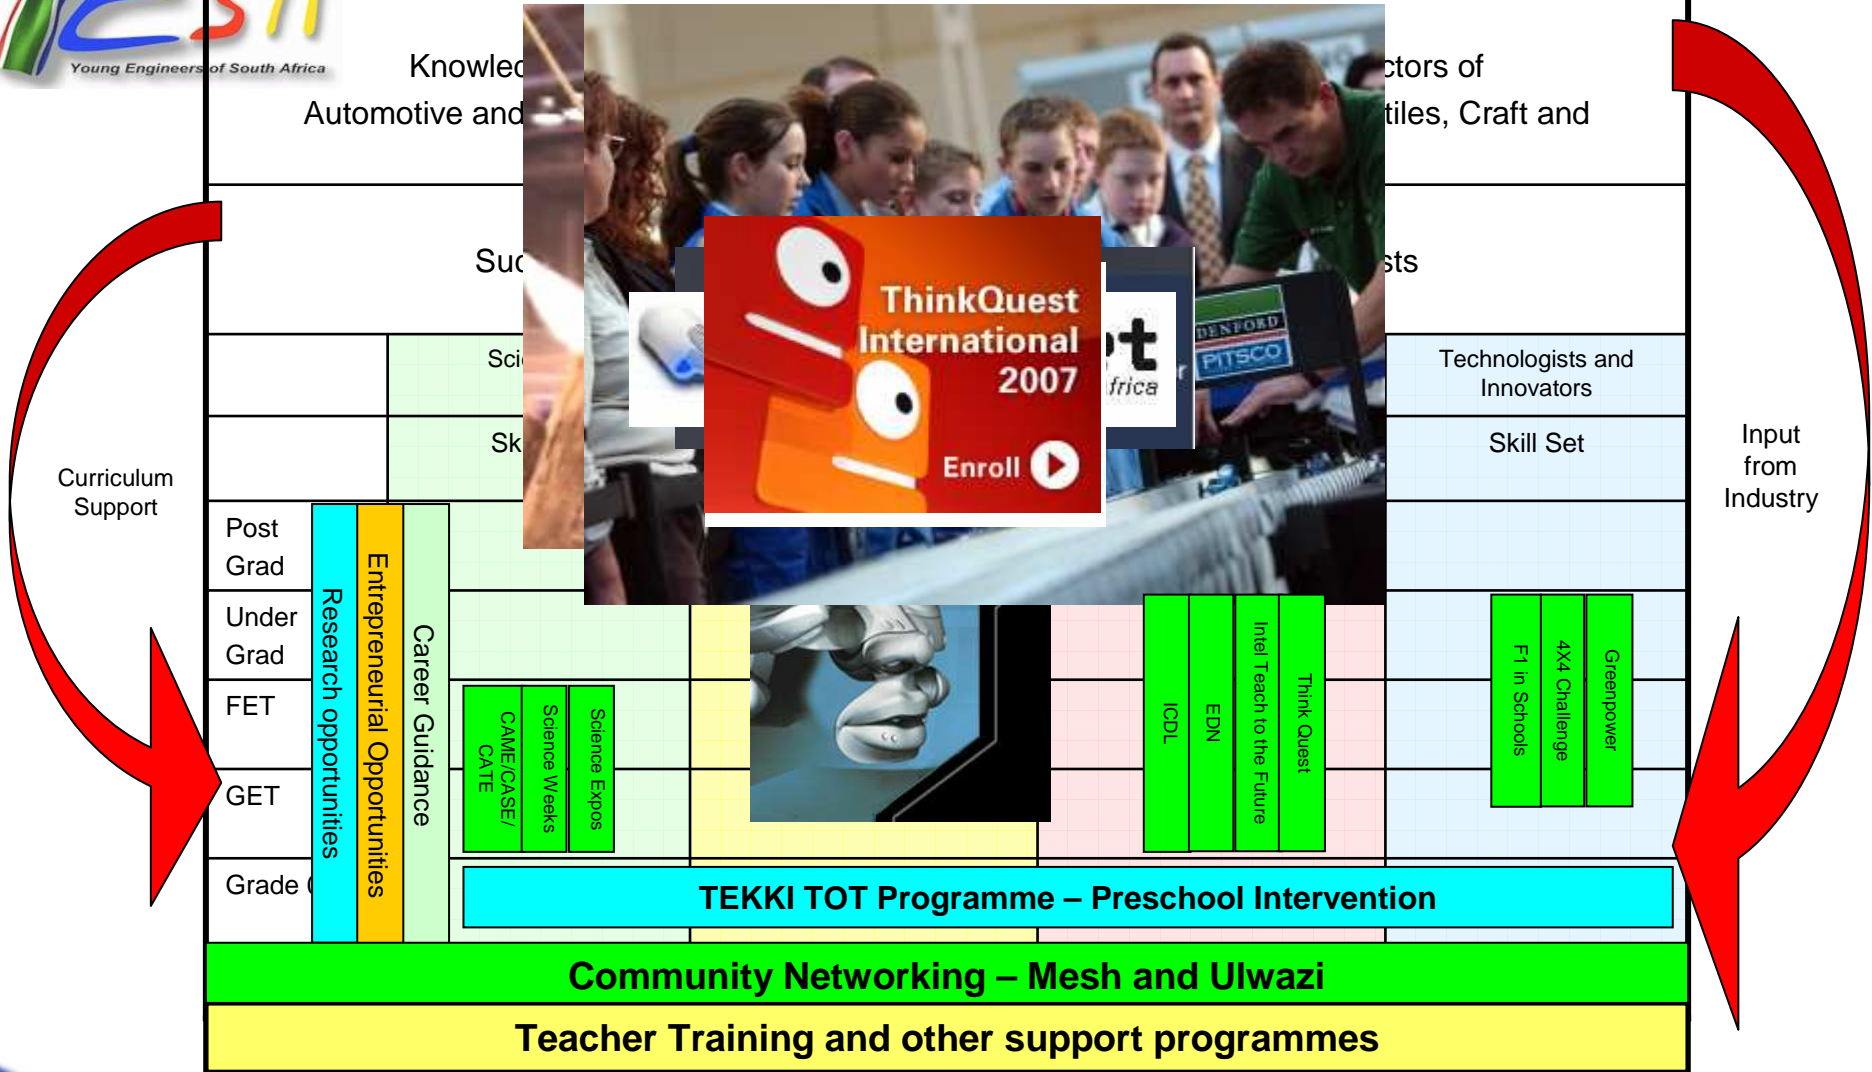

Broader Picture ICTs in Education – National Impact Knowledge Society, Global Competitiveness, SME coupled to key sectors of Automotive and Transport, Metals and Minerals, Chemical. Clothing and Textiles, Craft and Aerospace

YESA Process

Digital Inclusion

- Digital inclusion is not about computers, the internet or even technology.
- It is about
 - using technology as a channel to improve skills,
 - to enhance quality of life,
 - to drive education, and
 - to promote economic well-being
- It is about social inclusion, and because of this, the potential for technology to radically improve society and the way we live our lives should not be underestimated. (Pinder)

We need to start today for ...

- South Africa to produce more people like...
 - Dr Barnard (Heart Surgeon)
 - Mark Shuttleworth (IT Entrepreneur)
 - Trevor Wadley (Electronic Engineering)
 - Phillip Tobias (Palaeontology)
 - George Ellis (Cosmology)
 - ...

Thank – you!
