The European Union's LiveDiverse project – interplay between livelihoods and biodiversity in the South African case study area

Authors: I. COOPER, K. KEESE, H. CHAMBERLAIN & P. VITTI
CSIRO Natural Resources and Environment, PO Box 88, Pretoria 001, South Africa
Email: chamberl@csiro.au

Introduction: The LiveDiverse project is a transdisciplinary research project that seeks to understand the interplay between livelihoods and biodiversity in the South African case study area. The project is funded by the European Union and the South African government. The project aims to understand the interplay between livelihoods and biodiversity in the South African case study area. The project is funded by the European Union and the South African government. The project aims to understand the interplay between livelihoods and biodiversity in the South African case study area.

Objectives: The project aims to understand the interplay between livelihoods and biodiversity in the South African case study area. The project is funded by the European Union and the South African government. The project aims to understand the interplay between livelihoods and biodiversity in the South African case study area.

Methodology: The project uses a transdisciplinary approach to understand the interplay between livelihoods and biodiversity in the South African case study area. The project is funded by the European Union and the South African government. The project aims to understand the interplay between livelihoods and biodiversity in the South African case study area.

Results: The project has identified several key findings related to the interplay between livelihoods and biodiversity in the South African case study area. The project is funded by the European Union and the South African government. The project aims to understand the interplay between livelihoods and biodiversity in the South African case study area.

Conclusion: The project has demonstrated the importance of understanding the interplay between livelihoods and biodiversity in the South African case study area. The project is funded by the European Union and the South African government. The project aims to understand the interplay between livelihoods and biodiversity in the South African case study area.

Scientific poster which was presented at the Academy of Science of South Africa (ASSAF) Young Scientists Conference which was held in Pretoria in October 2010.

Sustaining Commons: Sustaining Our Future

The 13th Biennial Conference of the International Association for the Study of the Commons (IASC) will be held in Hyderabad, India from January 10th to 14th, 2011. The Conference is being held in South Asia for the first time, and its departure from the past will be hosted by a grassroots organization - Foundation for Ecological Security (FES). The Conference will take a critical look at the interface between human and natural resources in general and commons in particular, to build the understanding of the elements and interrelationships that sustain life, livelihoods, action and our future. By bringing the Conference agenda in the ongoing discussions around conservation, local governance, social justice and human rights, agrarian issues and livelihoods, and by placing it at the interface of policy, research and practice, the aim is to bring practitioners, scholars and decision makers to a common meeting ground and identify areas and resources to inform policy and programme action as well as guide future research.

For details visit the Conference website: <http://iasc2011.fes.org.in/>, Email: iasc2011@fes.org.in

13th Biennial Conference of the International Association for the Study of the Commons
Hyderabad, 10 - 14 January 2011
Hosted by FOUNDATION FOR ECOLOGICAL SECURITY
Chaired by: Mr. Nitin Desai | Co-Chair: Jagdish Narain Pappu
